

Center for Geoscience & Society: Consulting and Collaborative Services

The Center for Geoscience & Society deploys expertise through flexible, tailored consulting, and collaborative services that are compatible with its mission to build awareness of geoscience in action.

Projects:

The Center provides curriculum design support for the **Michigan Science, Technology, and Assessment Reform (MiSTAR) Project**, which is developing a middle school integrated science curriculum that aligns with the Next Generation Science Standards and incorporates content that is relevant to Michigan.

The Center has a memorandum of understanding with Schlumberger, and has taken other steps, to initiate the **International Geoscience and Energy Education Teacher Training Program** to enhance energy awareness through instructional activity development and teacher professional development.

The Center is consulting with organizations and coalitions in several countries to support efforts to extend to **internationalize Earth Science Week**.
