## AEG: Accounts from the Science-Public Interface in their June 2016 Newsletter

Association of Environmental & Engineering Geologists

The June 2016 Association of Environmental and Engineering Geologists Newsletter has several articles of interest to geoscientists nationwide. Rick Kolb of the AEG Carolinas Section talks about how the regional section worked in offering short courses and conferences to regional stakeholders and decision makers. And AEG's Past President, Jennifer Bauer, shares about how her team introduced landslide mapping resources to local real estate agents, mortgage lenders, appraisers and home builders. AEG Member Ron Harris also talks about natural disaster prevention work he had done in Indonesia, in part, through the Department of State on a Fulbright Research Fellowship. This issue also contains a special section focusing on AEG's upcoming Annual Meeting in Kona, Hawaii. Thumb through for pictures of the geology - just in case you aren't able to make it in person!
