

AAPG Announces Digital Immersive Geosciences Program with VWORLD

American Association of Petroleum Geologists

Geological Society of America

The American Association of Petroleum Geologists announced a partnership with French company VWORLD. Through this they will launch the first interactive digital publishing medium, the Digital Immersive Geosciences (DIG) platform. The DIG platform will allow geoscientists to experience rocks, outcrops and geologic formations from anywhere on the planet. The DIG technology was conceptualized by an ad hoc committee of experts, and the prototype was introduced at the 2015 AAPG Annual Convention and Exhibition (ACE) in Calgary. Demonstrations will be offered at the Geological Society of America Annual Meeting in Denver, CO, and the full release of the DIG Program will be unveiled at the 2017 AAPG-ACE Centennial in Houston.
