

SSSA Scientist Explores the Relationship Between Soil Color & Climate

Soil Science Society of America

In the "Soils Matter, Get the Scoop" blog run by the Soil Science Society of America, scientists explore the general relationships that exist between soil color and climates. This piece is a fun read that also touches on other factors that influence soil formation, and would be a great tool to introduce people to the great variety of soils found on the planet. Also, the ASA-CSSA-SSSA Annual Meeting is coming up in Phoenix, November 6-9, 2016 so stop by to learn more about soil, agronomy and crop science! They will be accepting entries for their annual photo contest until September 15th, 2016.
