#OneStrangeRock premieres tonight at 10pm Eastern!

Bring ONE STRANGE ROCK to your School for Free:

From award-winning filmmaker Darren Aronofsky, National Geographic's new docu-series ONE STRANGE ROCK is a mind-bending, thrilling journey that explored the fragility and wonder of planet Earth—one of the most peculiar, unique places in the universe. This earth science series is narrated by actor Will Smith and features perspectives from eight astronauts on the wonders of Earth as seen from space. The series debuts tonight, March 26, at 10pm eastern time.

National Geographic's ONE STRANGE ROCK Educator Resources are now available, including a curriculum guide with resources to help extend the themes and topics from ONE STRANGE ROCK into meaningful discussions. These resources also include activity ideas to conduct with student groups, as well as an interactive quiz to assess learning. [Click here](#) for the series' curriculum.

National Geographic is making the first episode available for free screenings this spring in high schools, colleges, and after-school programs nationwide. Sign up [here](#) to request a free preview screening of ONE STRANGE ROCK! Also the Association of Space Explorers will be hosting a Twitter chat with some of their astronaut members during the broadcast on Monday, March 26th from 10-11pm ET and National Geographic Channel will be retweet posts throughout the conversation.
