## EIA interactive map showing energy structure potentially impacted by storms

The U.S. Energy Information Administration (EIA) has released several interactive maps that combine real-time data from the National Oceanic and Atmospheric Administration's (NOAA) Hurricane Center with maps showing the nation's energy infrastructure and resources. These maps, released as peak hurricane season approaches, serve to better illustrate the potential impact of a storm for industry, government decisions makers, and the general public. The new maps are available at any time on the EIA's Energy Disruptions webpage.
