NAS report on Ocean Acidification Strategic Plan

The National Academies of Sciences released a report on the “Review of the Federal Ocean Acidification Research and Monitoring Plan.” Developed as a guide for federal research, the strategic plan assesses the impacts of ocean acidification and help policymakers develop strategies for adaptation and mitigation. The report discusses the potential consequences of increasing ocean acidity, and reviews the Strategic Plan for Federal Research and Monitoring of Ocean Acidification prepared by the Interagency Working Group on Ocean Acidification, which was created as part of Federal Ocean Acidification Research and Monitoring Act (FOARAM) in 2009.
