SSSA Asks the Ever-Important Question: When Does a Rock Become #Soil? #Geoscience

Soil Science Society of America

Geoscience is an inherently interdisciplinary field of study. Where one geoscientist's research transitions from one field to another is a hard line to draw, and that is why so many organizations are part of the AGI Federation, including organizations like the Soil Science Society of America! In their "Soils Matter" blog, they ask a question that underscores the valuable relationship between geology and soil science: when does a rock become a soil? Explore the answer from the soil experts!

It's important to celebrate the breadth of geoscience. Explore your place in our community by proudly exclaiming "I'm a Geoscientist."
