Comprehensive Clearinghouse for Earth and Space Science Education Launches with Thousands of Resources

A national center focused on the geosciences launches today as the world's most comprehensive and up-to-date online clearinghouse for Earth and space science information and educational resources, ranging from high school curricula and classroom activities to video collections, career resources, and national research reports. The first such clearinghouse of its scope and type, the Center for Geoscience Education and Public Understanding's searchable web site (www.geocntr.org) provides the geoscience community, schools, and the general public with an extensive collection of resources and research from reliable science and education organizations.
