Latest Geoscience Currents highlights state geological survey publications

Yesterday, the AGI Workforce Program published Geoscience Currents #115 - "State Geological Survey Publications: Reaching Beyond State Boundaries." Many publications from state geological surveys are featured in the Critical Issues Research Database, which is maintained by AGI's Critical Issues Program.

Geoscience Currents are data snapshots related to the geoscience profession. Produced by the AGI Workforce Program, either internally or in cooperation with other departments and organizations, the Currents allow for quick release of timely data. All Currents are archived on this site, or you can subscribe and have them emailed to you as soon as a new Current is released.

A printable version of this Current is also available [PDF].
