Saving Mongolia's Dinosaurs and Inspiring the Next Generation of Paleontologists

Saving Mongolia's Dinosaurs and Inspiring the Next Generation of Paleontologists

Joseph Lilek (jlilek@americangeosciences.org)

2/22/2017

Some of the world's richest fossil locales are in Mongolia: For instance, you can find dinosaur fossils every few steps in the country's Flaming Cliffs. But many Mongolians have no idea their country has such a treasure trove of dinosaurs because the specimens are often removed and displayed in other countries. However, one Mongolian paleontologist is working to change this paradigm by introducing children to dinosaur science and rebuilding Mongolia's fossil collection. In the March feature of *EARTH Magazine*, writer Thea Boodhoo describes her experience working with paleontologist Bolortsetseg Minjin and the Institute for the Study of Mongolian Dinosaurs, and recounts her incredible journey across Mongolia in a mobile dinosaur museum donated by the American Museum of Natural History. Read her story in *EARTH Magazine*: <https://www.earthmagazine.org/article/saving-mongolias-dinosaurs-and-inspiring-next-generation-paleontologists>.

The March issue of *EARTH Magazine* is now available online. Ascend Mount Katahdin, the majestic north end of the Appalachian Trail in this issue's *Travels in Geology*. Or dive into the unrecognizable snowscape of New York City during the Great Blizzard of 1888. For these stories and more, subscribe to *EARTH Magazine*.

###

The American Geosciences Institute is a nonprofit federation of geoscientific and professional associations that represents more than 250,000 geologists, geophysicists and other earth scientists. Founded in 1948, AGI provides information services to geoscientists, serves as a voice of shared interests in the profession, plays a major role in strengthening geoscience education, and strives to increase public awareness of the vital role the geosciences play in society's use of resources, resiliency to natural hazards, and interaction with the environment.
