

John Kemper

John Kemper graduated with a Bachelor of Science with honors in Geology from the University of Maryland in May 2013. His undergraduate research focused on sediment transport and the effect of urbanization and land use changes on stream channel morphology. John's research interests include the effects of sediment supply and grain size on sediment transport dynamics and channel morphology, rainfall-runoff relationships and flood forecasting, and sediment transport and channel morphology in general. He plans to begin work toward a graduate degree in hydrology in the near future. He is originally from Philadelphia, PA.
