GeoRef Preview of the Week: Mount Etna

Italy's Mount Etna erupting, with glowing lava at the summit.

Italy's Mount Etna is erupting again, and we took this opportunity to check out the latest titles in the GeoRef Previews Database. We found this abstract from the Istituto Nazionale di Geofisica e Vulcanologia on an interface for understanding and forecasting lava hazards. This title was found with nearly 100 other titles. Note: This data is in process for inclusion in GeoRef. It may not yet have been indexed, given a translated title, or checked by a GeoRef editor when you see it.
