Geoscience in Your State Factsheets

How does geoscience affect your state?

The AGI Geoscience Policy team created State Geoscience Information factsheets to inform geoscientists and decision makers on how geoscience impacts their state. These factsheets highlight geoscience areas including, employment, water, minerals, energy and hazards in each state. They also demonstrate how federal research agencies, such as the National Science Foundation, U.S. Geological Survey, National Aeronautics and Space Administration, and the National Ocean and Atmospheric Administration contribute beneficial geoscience information to each state.

If you have any questions on our state factsheets, please contact us at govt@americangeosciences.org

Image:
Geoscientists study Earth's physical properties and processes, helping us understand our planet's resources, hazards, and climate. Geoscience research supports industries that drive our economy, like mining, energy, and infrastructure. Your work as a geoscientist could help address pressing environmental issues, improve resource management, and inform policy decisions.
