House Republicans introduce resolution on climate change

March 13, 2017

House Republicans introduced a resolution on March 13 that emphasizes the importance of conservative environmental stewardship for future generations and recognizes the extreme impacts of increased heat waves, precipitation, wildfires, and droughts, as well as rising sea levels.

H.Res.195 expresses the commitment of the House of Representatives to "working constructively, using our tradition of American ingenuity, innovation, and exceptionalism, to create and support economically viable, and broadly supported private and public solutions to study and address the causes and effects of measured changes to our global and regional climates, including mitigation efforts and efforts to balance human activities that have been found to have an impact."

The resolution was referred to the House Energy and Commerce Committee, Subcommittee on Environment.
