

Redox-Active Minerals in Natural Systems #mineral

Mineralogical Society of Great Britain and Ireland

The societal value of redox-active minerals, which are abundant in nature, is increasingly apparent as they have become materials useful in clean technology development. The Mineralogical Society of Great Britain and Ireland is hosting a symposium to bring scientists together to discuss redox-active minerals to advance understanding of the biological processes that mediate redox active mineral formation, and to explore the electron-transfer reactions occurring at molecular levels. The meeting is set for June 21-22, 2017 at the University of Manchester.
