

Scott Miller

Scott Miller graduated in May 2013 with a bachelor's degree in Geology from Appalachian State University. During his undergraduate career Scott was able to map the Sevier Orogeny and resulting Inner Cretaceous Seaway, the historic shorelines of Lake Bonneville, and the two most recent Quaternary glacial retreats in the Ruby Mountains, Nevada. Before interning at AGI, Scott curated mud cores at the Antarctic Marine Geology Research Facility at Florida State University. His research interests include geologic hazard mitigation and geothermal energy production.
