

## 2018-2019 AGI Fisher Fellow Ryan Edwards

Ryan Edwards earned his Ph.D. in Civil and Environmental Engineering from Princeton University. His research concentrated on improving understanding of hydraulic fracturing (“fracking”) and geological storage of carbon dioxide. Ryan also has a focus on energy and climate policy. He was a fellow with the Woodrow Wilson School of Public and International Affairs at Princeton, where he investigated pathways to accelerate deployment of carbon capture and storage, and he also led a team working on Princeton University’s carbon emissions reduction plans. Prior to moving to the U.S. from Australia, Ryan completed a B.E. in Civil and Environmental Engineering and B.Sc. in Geology at the University of Adelaide and worked as an engineer in the mining and natural resource management industries. Ryan is looking forward to gaining insight into the policy development process as the 2018-19 William L. Fisher Congressional Geoscience Fellow.
