Agencies Working on Geoscience Issues in Mississippi

Mississippi Department of Environmental Quality
https://www.mdeq.ms.gov/
The mission of the Mississippi Department of Environmental Quality is to safeguard the health, safety, and welfare of present and future generations of Mississippians by conserving and improving our environment and fostering wise economic growth through focused research and responsible regulation.

Mississippi Emergency Management Agency
https://www.msema.org/
The mission of the Mississippi Emergency Management Agency is to coordinate activities that will save lives, protect property and reduce suffering of Mississippi’s citizens and their communities impacted by disasters through a comprehensive and integrated program of disaster preparedness, response, recovery and mitigation initiatives.

Mississippi Office of Geology
https://www.mdeq.ms.gov/geology/
The Office of Geology is the component of the Department of Environmental Quality responsible for research into the surface and subsurface geology, paleontology, and mineral resources of Mississippi; regulating the permitting of mines and the reclamation of surface-mined land; and administering the Mississippi Digital Earth Model (MDEM).

Mississippi Soil & Water Conservation Commission
https://www.mswcc.ms.gov/
The MSWCC guides, promotes and demonstrates the conservation, development, protection and proper utilization of the soil, water and related resources of the State.

Maps & Visualizations

Interactive map of offshore sand and gravel resources of the United States
Bureau of Ocean Energy Management

The Bureau of Ocean Energy Management's Marine Minerals Information System (MMIS) provides an interactive map with information on offshore sand and gravel resources for 18 states on the Atlantic and Gulf coasts of the United States. The system includes: Sand and gravel resources Marine...

Case Studies & Factsheets
Dry well usage across the United States

Introduction Dry wells improve stormwater drainage and aquifer recharge by providing a fast, direct route for rainwater to drain deep into underlying sediment and rock. Dry wells are most common in the western U.S. where clay or caliche layers slow down the natural drainage of water into underlying...
