Agencies Working on Geoscience Issues in Nebraska

Nebraska Department of Environmental Quality

<http://deq.ne.gov/>

The Nebraska Department of Environmental Quality was created pursuant to passage of the Nebraska Environmental Protection Act in 1971. Although the Department has grown and been given additional responsibilities over the years, its ongoing mission has remained the same - the protection of Nebraska's air, land and water resources.

Nebraska Department of Natural Resources

<https://dnr.nebraska.gov/>

Finding a balance between competing demands is a key to Nebraska's resource future. Assessing impacts of alternative soil and water management options requires an understanding of complex issues and substantial amounts of reliable data. The Nebraska Department of Natural Resources (NDNR) is committed to providing Nebraska's citizens and leaders with the data and analyses they need to make wise resource decisions for the benefit of all Nebraskans both now and in the future. The NDNR is a State agency with responsibilities in the areas of: Surface Water, Groundwater, Floodplain Management, Dam Safety, Natural Resources Planning, Water Planning and Integrated Management, Storage of Natural Resources and Related Data, and Administration of State Funds.

Nebraska Emergency Management Agency

<https://nema.nebraska.gov/>

The Nebraska Emergency Management Agency is charged by state statute to reduce the vulnerabilities of the people and communities of Nebraska from the damage, injury and loss of life and property resulting from natural, technological or man-made disasters and emergencies.

Nebraska Geological Survey

<http://snr.unl.edu/csd/>

The Survey's mission is to investigate and record information about Nebraska's geologic history, its rock and mineral resources, the quantity and quality of its water resources, land cover and other aspects of its geography, as well as the nature, distribution and uses of its soils.

Maps & Visualizations

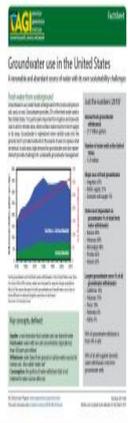

Interactive database for geologic maps of the United States

U.S. Geological Survey

The U.S. Geological Survey hosts the National Geologic Map Database (NGMDB). This interactive tool serves as a national archive for high-quality, standardized geologic maps created by the U.S. Geological Survey and state geological surveys. The MapView section of the NGMDB displays geologic maps...

Groundwater use in the United States

Fresh water from underground Groundwater is any water found underground in the cracks and pores in soil, sand, or rock. Groundwater provides 25% of the fresh water used in the United States.¹ It is particularly important for irrigation and domestic uses in arid or remote areas, where surface water...
