By the numbers: Vermont

- 941 geoscience employees (excludes self-employed)
- 37 million gallons/day: total groundwater withdrawal
- $149 million: value of nonfuel mineral production in 2017
- 43 total disaster declarations, including 21 severe storm, 15 flood, and 2 drought disasters (1953-2017)?
- $959,000: NSF GEO grants awarded in 2017

**Agencies Working on Geoscience Issues in Vermont**

**Vermont Center for Geographic Information**
https://vcgi.vermont.gov/

The Vermont Center for Geographic Information, a division of the Agency of Commerce and Community Development (VCGI), will provide strategic governance and deliver high quality geospatial data, services, solutions, infrastructure and expertise using methods that are efficient and effective, client-focused, and consistent with our enabling legislation.

**Vermont Department of Environmental Conservation**
https://dec.vermont.gov/

The Vermont Department of Environmental Conservation aims to preserve, enhance, restore, and conserve Vermont’s natural resources, and protect human health for the benefit of this and future generations.

**Vermont Emergency Management**
https://vem.vermont.gov/

Vermont Emergency Management manages and provides support to a number of emergency response agencies in Vermont. Programs managed by VEM include Debris Management, the Emergency Alert System, the National Incident Management System, the Radiological Emergency Response Plan, the State Emergency Response Commission, and VT-ALERT.

**Vermont Geological Survey**
https://dec.vermont.gov/geological-survey

The Vermont Geological Survey, also known as the Division of Geology and Mineral Resources in the Department of Environmental Conservation, conducts research and mapping relating to the geology, resources and topography of the State.

Interactive database for geologic maps of the United States

U.S. Geological Survey

The U.S. Geological Survey hosts the National Geologic Map Database (NGMDB). This interactive tool serves as a national archive for high-quality, standardized geologic maps created by the U.S. Geological Survey and state geological surveys. The MapView section of the NGMDB displays geologic maps...

Present Day Climate Change

Climate Science 101 Climate is the average of weather conditions over several decades. Geoscientists monitor modern climate conditions (1880 A.D. to present) in part by taking direct measurements of weather data (i.e., air temperature, rainfall and snowfall, wind speed, cloudiness, and so on)...
