Geoscience in Your State: Washington
By the numbers: Washington

- 12,118 geoscience employees (excludes self-employed)
- 1.53 billion gallons/day: total groundwater withdrawal
$901 million: value of nonfuel mineral production in 2017

132 total disaster declarations, including 78 fire, 28 flood, and 16 severe storm disasters (1953-2017)?

$34.4 million: NSF GEO grants awarded in 2017

Agencies Working on Geoscience Issues in Washington

**Washington Department of Ecology**
https://ecology.wa.gov/
Ecology is Washington’s environmental protection agency. The mission is to protect, preserve, and enhance Washington’s land, air, and water for current and future generations.

**Washington Division of Geology and Earth Resources**
https://www.dnr.wa.gov/geology
The Washington DNR, of which DGER is a division, informs the public, government, and industry about the consequences of geologic events and about the nature of the land. DNR monitors, assesses, and researches the causes of earthquakes, landslides, and volcanoes--critical information for both government and private sector planners working to reduce the human and financial effects of natural disasters.

**Washington Emergency Management Division**
https://mil.wa.gov/emergency-management-division
During state emergencies, EMD manages the State Emergency Operations Center located on Camp Murray, near Tacoma, and coordinates the response to ensure help is provided to those who need it quickly and effectively.

Interactive database for geologic maps of the United States
U.S. Geological Survey

The U.S. Geological Survey hosts the National Geologic Map Database (NGMDB). This interactive tool serves as a national archive for high-quality, standardized geologic maps created by the U.S. Geological Survey and state geological surveys. The MapView section of the NGMDB displays geologic maps...

Case Studies & Factsheets
Valley Fever - A Health Hazard in Southwestern Dust
What grows in arid, sandy soils? How do these soils become dust? Many small organisms, such as bacteria and fungi, grow among the sand and silt particles in dry valley and desert soils. At the soil’s surface, these organisms often form biological webs (“microbiotic crusts”) that keep small sand and...

Ocean Acidification Impacts on Fisheries
2016-03-11
This webinar addresses how geoscience helps us to understand ocean acidification, ocean acidification's impacts on marine life, and what states and municipalities can do to reduce the fishery-related economic impacts of ocean acidification.
