No More Time to Waste: Moving Science to Action at Scales that Matter

In the last two decades, a significant fraction of the geoscience and global environmental sciences communities have seen a shift in thinking – from science as its own fundamental goal, to science for understanding change, to science that supports and drives action.

On Monday, December 10, join the National Academies of Science, Engineering, and Medicine for a free keynote lecture by Dr. Pamela Matson, NAS member and Stanford University professor. Dr. Matson will discuss how “science to action” has evolved in the context of current global environmental changes and social issues.
