GeoRef News

The GeoRef Preview Database is updated weekly!
168,965 references to recent publications were loaded in our most recent update.

**Geoscience Theses and Dissertations in GeoRef**
It is that time of the year when we request information on Master’s and Bachelor’s theses and Doctoral dissertations for the 2022-2023 time period. We are interested in receiving information in the geoscience disciplines including soils, hydrogeology, marine geology, and environmental geology so that references to these documents can be included in GeoRef, the primary bibliographic service for the geosciences used by thousands of researchers worldwide. Visit GeoRef database for more information.

In addition to being referenced in GeoRef, information on recent theses and dissertations is linked to AGI’s popular publication the Directory of Geoscience Department.

When submitting information directly, please include as much information as possible: title, author, date of publication, degree, total number of pages, number of references in bibliography, details on fold-out maps, illustrations, etc.

If your theses or dissertations are available via the internet, please send us information on how we might access them: through ProQuest, your online library catalog, a department web site, in an electronic repository, etc.

If they are available through an electronic repository that is not open to outside visitors, please consider sending us as much information as is possible directly.

If they are available through your catalog, please send us advice on how to locate the theses and dissertations for the relevant departments.

Send an email to ml@americangeosciences.org to submit them or if you have any questions.

Check out our newest complimentary **Midwest Geological Sequestration Consortium Research Publications Database** on our Online Database list. For more information visit https://carbon.americangeosciences.org/vufind/.

**GeoRef now contains more than 4 million** references to the world's geoscience literature. On July 11, 2018 GeoRef staff passed the 4 million reference mark. Since its development in the late 1960’s, the database has grown steadily – reaching its first million record in 1982. With the acceleration of scientific publishing, the last million records were added over a span of only 9 years. Visit Open-Access Journals/Series for the complete list of Open-Access Series covered in GeoRef. Recent additions this month include:

- **Diatom = Keiso Gakkaishi.** ISSN 0911-9310. eISSN 2186-8565.
- **Environmental Data Science.** eISSN 2634-4602.
- **Frontiers in Ecology and Evolution.** eISSN 2296-701X.
- **International Journal of Energy Research.** ISSN 0363-907X. eISSN 1099-114X.
- **Journal of Sea Research (Den Burg).** ISSN 1385-1101. eISSN 1873-1414.
- **Microbiology Spectrum.** eISSN 2165-0497.
- **Mining.** eISSN 2673-6489.
- **mSphere.** eISSN 2379-5042.
- **RMZ Materials and Geoenvironment.** ISSN 1408-7073. eISSN 1854-7400.
