

EarthComm Earth's Natural Resources: Water Resources and Your Community

Students are challenged to prepare a report to that examines how the construction of three new developments in the community would impact the water resources of the community.

Students Will...

- Understand how the hydrosphere is a part of Earth systems.
 - Participate in scientific inquiry and construct logical conclusions based on evidence.
 - Recognize that water is an indispensable natural resource whose use and quality needs to be carefully monitored.
 - Appreciate the value of Earth science information in improving the quality of lives, globally and within the community.
-
