

2014-2015 AGI Fisher Fellow Joseph Majkut

The 2014-2015 William L. Fisher Congressional Geoscience Fellow is Joseph Majkut. Joseph graduated with his B.S. in Mathematics from Harvey Mudd College in 2006. He spent the following two years at the Technical University of Delft, The Netherlands, studying for an M.S. in Risk Analysis and Environmental Modeling. His PhD is from the Program in Atmospheric and Oceanic Studies at Princeton University, with a certificate in Science, Technology and Environmental Policy. As a researcher, he developed new methods for using computer models and observational records to detect changes in the oceanic carbon cycle that result from climate change. His research also asks how climate policy mechanisms can consider the uncertainty in climate projections and incorporate observational information robustly. As a congressional fellow, Joseph looks forward to learning two related things, how scientific results and principles are put to use in developing legislation and how to pose policy questions that can help scientists ask fundamental and policy-relevant questions.
