

November 29, 2017

The Honorable Bruce Westerman  
U.S. House of Representatives  
130 Cannon HOB  
Washington, D.C. 20515

Dear Congressman Westerman,

The undersigned organizations are writing to thank for your leadership in championing legislation to establish clear standards for federal agencies in their utilization and dissemination of geospatial data. We strongly support H.R. 4395 and urge you to seek passage of this important bill.

The rapidly-growing geospatial technologies and analysis industries are currently estimated to produce over \$100 billion in revenue annually and will foster job growth of between 16-35 percent. All federal agencies generate, use, and share geospatial data, and the important provisions contained in the revised legislation would strengthen U.S. geographic science, research capacity, and competitiveness. This bill would harness the productivity, talent, scientific and technical skills, and creativity and innovation that characterize the nation's GIS and mapping companies and workforce.

Please do not hesitate to let us know if you have any questions about these important issues. We look forward to continuing to work with you and your staff to enact this vital legislation.

Sincerely,

American Association of Geographers (AAG)
