For more than 40 years, AGI's Data Sheets have been a critical tool for the geoscientist in the field, the lab, and the classroom. For decades its bright orange cover and three-ring binding were distinctive in the geoscience community. The book evolved into its current, full-color and spiral bound format with the 2005 debut of the fourth edition.

Now AGI has tapped some of the best minds in the geosciences to produce this fifth edition. Featuring the contributions of over 240 experts worldwide in their respective fields, this new, expanded edition is over 470 full-color pages. Three years of work went into the Handbook to broaden its scope across the disciplines. With more than 170 complete new data sheets, and full revisions of prior data sheets, over 85% of the content is either new or revised for the fifth edition. The Geoscience Handbook is the quick reference tool for key metrics and concepts, a guide to cornerstone papers and recent developments, as well as short tutorials on topics that may not be familiar to all geoscientists.

A High-Altitude Tour of North America’s Spectacular Volcanoes, Canyons, Glaciers, Lakes, Craters, and Peaks
By Mary Caperton Morton

Aerial Geology is an up-in-the-sky exploration of North America’s 100 most spectacular geological formations. Crisscrossing the continent from the Aleutian Islands in Alaska to the Great Salt Lake in Utah and to the Chicxulub Crater in Mexico, Mary Caperton Morton brings you on a fantastic tour, sharing aerial and satellite photography, explanations on how each site was formed, and details on what makes each landform noteworthy. Maps and diagrams help illustrate the geological processes and clarify scientific concepts.

Fact-filled, curious, and way more fun than the geology you remember from grade school, Aerial Geology is a must-have for the insatiably curious, armchair geologists, million-mile travelers, and anyone who has stared out the window of a plane and wondered what was below.

Published by Timber Press
Hardcover; 308 pp.; 9½” x 10¾”; 281 color photos, 16 illustrations

“An incredibly fascinating and beautiful look at many of my favorite geologic playgrounds — a whole new perspective on the places and formations we love and how these unique landscapes were formed.”

One Man’s Planet: Earth in Today’s Political Culture

Stephen M. Testa

*One Man’s Planet* is one slightly off-centered geologist’s introduction to how politics, pop-culture and the earth sciences intertwine in our daily lives. It is a humorous look at a myriad of issues that grace the news and drive political debates from local councils to international discourse. *One Man’s Planet* picks apart the rhetoric on all sides of these debates to look at how the science describes the issue, often to the nakedness of the opposing parties. Tackling topics like climate, energy, water, and hazards, Stephen Testa channels Pink Floyd, Mad Max, and Shakespeare among others to examine the latest scientific understanding of these issues. He deftly weaves all this into a very informative and entertaining tapestry on the planet today and the planet’s tomorrow. Come tour the Earth with Testa as your guide!

This publication provides a completely rewritten and expanded update to the original Petroleum and the Environment, published in 2003 as part of AGI’s Environmental Awareness Series. Taking the form of 24 standalone but complementary factsheets and case studies, Petroleum and the Environment provides a coherent, impartial look at the range of environmental questions relating to oil and gas operations in 2018. Particular emphasis is placed on the current scientific understanding of each topic, as well as technological developments, regulations, sources of uncertainty, effective mitigation strategies, and areas of particular concern or progress. Just as importantly, Petroleum and the Environment contains a rich bibliography of primary data sources, high-quality analyses, regulatory information, and much more, allowing interested readers to pursue any topic to their own satisfaction.

The Geoscience Online Learning Initiative (GOLI) is an initiative by the American Geosciences Institute, started in cooperation with the American Institute of Professional Geologists, to provide a platform for on-demand, life-long learning and continuing education opportunities in the geosciences. GOLI consists of live webinar events and self-paced on-demand online courses. Interested individuals can register to attend live webinar events where participants interact with content experts and earn CEUs for their attendance. GOLI courses provide learners with the flexibility to actively self-pace their progress, since on-demand courses do not have a set schedule like traditional academic semester-based courses. GOLI courses are brought to you via the OpenedX Learning Management System (LMS) through which learners are able to browse course descriptions, enroll in specific courses, access content, and complete any course free of charge. Learners who complete courses offered through the GOLI platform with a passing grade of 70% or higher are eligible to purchase Continuing Education Units (CEUs) for a nominal fee.

Sample courses:

- An Introduction to Professional Writing for Geoscience Careers
- Communicating Cascadia’s Earthquake Risk
- Basics of Seismic Petroleum Exploration for New Hires
- Planning for Coastal Storm and Erosion Hazards
- Best Practices in Mineral Resource Estimation & Reporting
- Professionalism and Geoethics: Creating a Workplace Environment Where Everyone Can Succeed
