

Deer Tracks

Activity Sheet I

Spend some time looking at the **Forest Map** below. Do you see any things that you can recognize? Notice how this map is a human creation - that is, it was drawn with the help of a

computer as a representation of an area of land using symbols and shapes.

Forest Map

Now look at the **Forest Image** below. Unlike the map on the left, this image is an actual picture of the very same region of land taken from a satellite that was orbiting about 680 kilometers above the earth!

Forest Image

After you have studied the map and image for several minutes, think about the similarities and differences you see and answer the following questions.

In the **Forest Image**, you can see that the satellite measured several different colors as it captured this image. For example, the blue color represents water -- both a lake, and a stream. How about the other colors - what do you think they represent?

Dark green? _____

Light green? _____

Light tan? _____

Grey? _____

The white curved lines? _____
