---

Ask anybody in the mining industry and they will tell you how important it is to know the right terminology. This is despite the fact that geologists are famous for not agreeing to a terminology, and long-lasting debates in the field over a rock type is nothing new to a person who has been on a field trip with a group of geologists.

Terminology is very important and having a common consensus saves a lot of time and increases productivity. Without having a common agreement on understanding of terminology we are at risk of misaligned objectives and outcomes. Having a correct terminology matters even more when we are dealing with intra-discipline collaboration.

In this presentation, we will explain innovation terminology and related terms and also the importance of Innovation in Mining.
