Status of Geoscience Workforce 2014 Report Published by AGI

Alexandria, Va. – In the American Geosciences Institute’s newest Status of the Geoscience Workforce Report, released May 2014, jobs requiring training in the geosciences continue to be lucrative and in-demand. Even with increased enrollment and graduation from geoscience programs, the data still project a shortage of around 135,000 geoscientists by the end of the decade.

“Industry has recognized, and is mitigating the upcoming shortage of skilled geoscientists in their employ, but the federal geoscience workforce is still demonstrably shrinking” report author Carolyn Wilson said, noting that the federal geoscience workforce decreased in all sectors except meteorology; this includes geoscientists skilled in the energy, mining/minerals and hydrology fields. Combined with continued unevenness is the workforce readiness of many geoscience graduates and a regionally hot job market, the geosciences are a dynamic component of the U.S. economy.

The 2014 report not only covers the state of geoscience workforce and education in the K-12, universities, and major employers, but the role of 2-Year Colleges in the development of the future geoscience workforce is closely examined. The number of graduating geoscience majors who started their degrees at a two-year colleges has increased. This pool of talent represents a major area of potential growth in the geosciences as the discipline seeks to narrow the human capital deficits.

“Most importantly there is incredible potential for institutions to recruit from the diverse talent pools arising at two year institutions, and many career opportunities available to students enrolled in geoscience programs, and early-career geoscientists entering the workforce,” Wilson said. Plus, this is the first time we have seen a major shift in employment patterns in over a generation, with increasing number of bachelor recipients securing geoscience positions, and newly minted Master’s finding themselves in high demand.

More information on the report and links to purchasing the digital or print versions is available from the AGI website: <http://www.americangeosciences.org/workforce/reports/status-report-2014>

The American Geosciences Institute is a nonprofit federation of 49 geoscientific and professional associations that represents more than 250,000 geologists, geophysicists and other earth scientists. Founded in 1948, AGI provides information services to geoscientists, serves as a voice of shared interests in the profession, plays a major role in strengthening geoscience education, and strives to increase public awareness of the vital role the geosciences play in society’s use of resources, resiliency to natural hazards, and interaction with the environment.
